Committee Votes

EDUCATION, HEALTH, AND ENVIRONMENTAL AFFAIRS

Keep Antibiotics Effective Act of 2017
(Senator P. Pinsky, Delegate S. Robinson)
SB 422/HB 602 made Maryland the second state in the country to ban the non-therapeutic use of antibiotics in agriculture. Its passage reflects the efforts of advocates and legislators to find common ground on a policy that has, in previous years, been highly contentious. Beyond the environmental concerns of the effects on marine life and the Chesapeake Bay, this bill is critical in stemming the growth of antibiotic-resistant bacteria that have led to a public health crisis in hospitals and communities around the country.

Forest Conservation Act Task Force
(Senator S. Nathan-Pulliam, Delegate A. Healey)
SB 365/HB 599 would have created a task force to re-examine the Forest Conservation Act and determine the best means to achieve the State's goal of no-net-loss of forests. The bill passed unanimously out of the Education, Health, and Environmental Affairs Committee and the full Senate, however failed to receive a Committee vote in the House of Delegates, despite significant pressure from environmental advocates. House Committee leadership promised to explore the issue during the interim, but without a commitment to focus on the important issue of deforestation.

ENVIRONMENT AND TRANSPORTATION

Energy Efficient Housing
(Delegate D. Fraser-Hidalgo)
HB 970 provides consumers with information relating to energy-efficiency options available for installation in their new homes, which supports larger statewide goals of greenhouse gas reduction and energy efficiency. Maryland LCV support was instrumental in passing the bill out of Committee.

Fracking Ban
(Senator B. Zirkin, Delegate D. Fraser-Hidalgo)
SB 740/HB 1325 banned the process of hydraulic fracturing (or "fracking") in Maryland, decisively concluding a debate that has raged throughout the state for the past decade. Governor Hogan signed the bill into law on April 4th. The successful passage of this bill made Maryland the first state in the nation with gas deposits to enact a ban on a process that threatens the health and safety of Marylanders and our natural resources. The bipartisan Committee vote set the tone for the bill's ultimate success.

ECONOMIC MATTERS

Energy Storage Study
(Senator J. Rosapepe, Delegate M. Korman)
SB 715/HB 773 commissioned a study which would establish infrastructure guidelines for the development of energy storage technology throughout the State, which is a vital component to the successful expansion of clean-energy technology. The success of this bill lays the groundwork for more comprehensive legislation in years to come.

Green Champions for 2017

- 100% Score
- Lifetime scores since 2003 above 95%
- Primary sponsor for at least one Maryland LCV legislative priority in previous three years
- Not supporting LCV-opposed legislation on the hotlist during that awards legislative session

SENATE: Cheryl C. Kagan, Paul G. Pinsky, Victor R. Ramirez

HOUSE: David Fraser-Hidalgo, C. William Frick, Tawanna P. Gaines, Stephen W. Lafferty, Clarence K. Lam, Brooke E. Lierman, Shane Robinson

Lowest Scores for 2017

SENATE: Gail H. Bates, Adelaide C. Eckardt, Stephen S. Hershey, J. B. Jennings, Andrew A. Serafini

Bill Graveyard

Statewide Ban on Styrofoam
(Senator C. Kagan, Delegate B. Lierman)
SB 186/HB 229 would have banned the use of Styrofoam in consumer products, such as plates, cups, and take-away containers. Despite significant support from legislators in both chambers and from both parties, the bill failed to come to a vote in either House or Senate Committee. Nearly 1/3 of all Marylanders currently live under a county-wide ban on Styrofoam, which comprises a large percentage of consumer waste by volume. House leadership promised to launch a summer study to explore the issue during the interim.

Statewide Best Available Technology Septic Systems
(Senator J. Conway, Delegate S. Lafferty)
SB 266/HB 281 looked to put into statute the regulations that had required that all new and replacement septic systems include Best Available Technology (BAT) for nitrogen removal. While it passed through the Senate, it had been amended to a form that could no longer be supported by either legislative sponsors or advocates. House leadership promised to launch a summer study to explore the issue during the interim.

MARYLAND LEAGUE OF CONSERVATION VOTERS

2017 Environmental Scorecard

http://scorecard.mdlcv.org ▪ #MDLCVScore

This year, did your elected legislators:

- Protect you from the dangerous practice of "fracking"?
- Stand up for the health of our forests, our bees, and our oysters?
- Commit to a clean energy economy and combat climate change?

The 2017 Environmental Scorecard helps to answer these questions. Every year, Maryland League of Conservation Voters (Maryland LCV), along with our environmental colleagues, works tirelessly in the halls of Annapolis to fight for strong environmental legislation, and then, we put together this Scorecard to help you gauge how well your elected leaders represented your values as a Maryland conservation voter. We urge you to use the information presented here in your dialogue with legislators: thanking them for their pro-environment votes, and letting them know that you are disappointed when they chose otherwise.

The 2017 Scorecard shows that in an increasingly divided political climate, leadership in environmental stewardship can and must be a point of common ground. Maryland made national news by passing legislation that makes us leaders in protecting our land, air, and water from the hazards of drilling, pesticides, and unnecessary antibiotics - all with strong bipartisan support. New this year, we aim to showcase legislators who go above and beyond to push for the success of our conservation agenda. Highlighted in this scorecard is our first cohort of Green Champions—legislators who have shown extraordinary leadership in the cause of environmental protection. We will continue to look for ways to celebrate the unsung heroes—the elected officials whose dedication to reaching our common goal of a stronger, cleaner Maryland is not always reflected in their scores.

Every year, thousands of bills are introduced in the 90-day General Assembly session. While there were many other pieces of important environmental legislation, those included here are considered the most significant by a majority vote of the Maryland League of Conservation Voters Board of Directors.

With cuts to federal programs, we increasingly rely on our public servants in the Maryland General Assembly to stand strong to protect our land, air, and water against the threats of environmental degradation. Now more than ever, Maryland's elected officials need your voice and your support to push for policies that support healthy families and a stronger Maryland. We are honored to have the opportunity to serve as the political voice—your voice—for the environment.

For a more in depth look at the votes we scored, as well as past votes, please go to www. mdlcv.org. We urge you to read our full online scorecard, use our interactive map, and, most importantly, contact your legislators to voice your opinion.

Floor Votes

Pollinator-safe Habitat Areas
(Senator S. Nathan-Pulliam, Delegate A. Healey)

SB 386/HB 830 clarifies that State agencies may not use neonicotinoid pesticides on designated pollinator habitat areas, unless the Maryland Department of Health and Mental Hygiene determines that there is a public health emergency requiring extraordinary action. Neonicotinoid pesticides have been linked to colony collapse in bee populations. The bill passed with strong, bipartisan support and, despite resistance from his agencies, Governor Hogan signed the bill into law.

Washington, DC

Fracking Ban
(Senator B. Zirkin, Delegate D. Fraser-Hidalgo)

SB 740/HB 1325 banned the process of hydraulic fracturing (or "fracking") in Maryland, decisively concluding a debate that has raged throughout the state for the past decade. The bill passed with strong, bipartisan vote. Governor Hogan signed the bill into law on April 4. The successful passage of this bill made Maryland the first state in the nation with gas deposits to enact a ban on a process that threatens the health and safety of Marylanders and our natural resources.

Clean Energy Jobs Act—Veto Override
(Senator C. Pugh, Delegate B. Frick)

SB 921–16/HB 1106–16 increased the amount of energy Maryland derives from renewable sources (Renewable Portfolio Standard) to 25% by the year 2020. The bill was passed in 2016 with bipartisan support, but vetoed by Governor Hogan. The green-energy economy has the benefit of improving Maryland's air quality and its economy, while taking measures to combat the growing risk of irreversible climate change. The General Assembly voted to override the veto, putting Maryland on track to regain its position as a leader in renewable energy policy, however the vote fell on strict party-line votes. We are disappointed that clean air, clean energy, and good-paying clean jobs became a partisan issue, especially given the cooperation in so many other areas.

Keep Antibiotics Effective Act of 2017
(Senator P. Pinsky, Delegate S. Robinson)

SB 422/HB 602 made Maryland the second state in the country to ban the non-therapeutic use of antibiotics in agriculture. Its passage reflects the efforts of advocates and legislators to find common ground on a policy that has, in previous years, been highly contentious. Beyond the environmental concerns of the effects of marine life and the Chesapeake Bay, this bill is critical in stemming the growth of antibiotic-resistant bacteria that have led to a public health crisis in hospitals and communities around the country.

Energy Efficiency Programs—Calculation of Program
(Senator T. Middleton, Delegate S. Jameson)

SB 184/HB 514 put into code the EmPOWER program - a successful program established by regulation that encourages energy efficiency. In previous years, this program had broad bipartisan support, making the largely partisan divisions on this legislation a surprising and disappointing development. Encouraging and rewarding energy efficiency is an important step in reducing the State's reliance on fossil fuels and supporting a sustainable energy future.

Sustainable Oyster Harvesting
(Delegate J. Gilchrist)

HB 924 protects the boundaries of oyster sanctuaries until the completion of a report, commissioned by the General Assembly in 2016, examining the health and resiliency of the oyster population to determine sustainable levels of harvesting. The Sustainable Oyster Population and Fisheries Act of 2016 was passed with near unanimous support, however the 2017 legislation was deemed necessary after the Hogan Administration took steps to open up sections of protected oyster sanctuaries to harvesting before the report could be completed in 2018.
